

— PRODUCT OVERVIEW · AI COMPASS AUDIT

# Where is the real AI potential in your company?

For many companies today, the question is no longer “Should we use AI?” but “Where do we start?”. Most organizations have already adopted a few AI tools, yet remain far from AI-driven. The AI Compass Audit is a company-wide assessment of processes, data, documents, images, videos, and information flows.

We do not ask which AI tool might be interesting. We identify where the company’s real AI potential lies. The outcome is a prioritized AI roadmap and a concrete next step. From €4,950. 4 weeks.

## 4 weeks

full-company AI assessment

## €4,950

from, fixed-price proposal

## full

processes, data, documents, images

## pilot

ends with a recommendation

## An Implementation Partner, Not a Consultancy

We build systems that solve real business problems — tailored to existing operations, sustainable in the long term, for mid-sized and large enterprises. We do not pursue the most fashionable solution; we pursue the best value for money.

### Three Pillars, One Partner

#### AI Factory

Practical AI for enterprise environments: document processing, automation, customer service, image and video analytics, prediction, intelligent search.

#### Data Solutions

Reliable reporting starts with well-managed data: ETL, BI, master data management, migration, Data Governance.

#### Custom Development

Business applications, system integrations, process digitization — from frontend to backend, cloud and hybrid.

### What Makes Us Different

- **The team that assesses the project also builds it** — from the first workshop to production.
- **We build systems, not disconnected APIs** — frontend, backend, databases, integrations.
- **We start from real operations, not templates.**
- **Modular approach** — complete systems or individual components.
- **We specialize in projects where the challenge is difficult to define.**

#### KEY MESSAGE

We start with assessment and finish with a working system — and the same team carries the project from the first workshop to production.

## Practical AI with Real Business Value — Not Hype

A generic AI subscription is not the same as AI built around a specific business problem, measured and integrated into enterprise operations. We build the latter: complete AI processing pipeline from your data, testing multiple models on the same dataset and selecting the best value-for-money solution.

### Core AI Capabilities

- **Document Processing** — invoices, forms, contracts (typically 80% processing time reduction).
- **AI Automation** — replacing repetitive manual processes.
- **Customer Service & Contact Centers** — AI-assisted responses in Hungarian.
- **Image & Video Analytics** — manufacturing and visual quality control, performance measurement.
- **Predictive AI** — quality and behavioral forecasting.
- **Intelligent Search (RAG)** — enterprise knowledge search with source references.

### Ready-Made AI Products

- **AI Invoice Posting** — rule-based, audit-ready coding from images and PDFs.
- **AI Conveyor Monitor** — video analytics for operational performance.
- **Intelligent Chatbot** — hallucination-free, RAG-based knowledge assistant.
- **Intelligent Search Engine (RAG)** — answers from documents, not lists.

# Every product and service at a glance

AI Factory brings together AI services; Data Solutions creates order in enterprise data; Development builds custom systems. Every engagement starts with a fixed-price assessment.

Cloud & Hybrid Solutions · Data Protection & GDPR  
Compliance · Handwriting & Form Digitization

### READY-MADE SOLUTION

**DOCMAN:** Enterprise Document Management (Case  
Management, QES, Company Gateway)

## Full-company AI assessment — potential, not tools

We review processes, data, documents, image and video sources — serving three roles at once.

- 1 Full assessment**  
Processes, data, documents, images, videos, information flows — we review the entire organization.
- 2 Real potential**  
We do not look for tools; we identify where genuine, value-creating AI opportunities exist in the company.
- 3 Prioritization + roadmap**  
Opportunities ranked by value and feasibility — what to start with and in what order.

### IMPORTANT DISTINCTION

The Compass Audit is not the question “Which AI tool would be interesting?” but a complete company-wide AI assessment: we review processes, data, documents, image and video sources. Often our best advice is: not yet — and we show the right sequence. The outcome is prioritization and a pilot recommendation.

## Three situations where a structured AI view is missing

- 1 Bought AI, never implemented it**  
The company purchased a few tools, but never became AI-driven — the potential remains unused.
- 2 No internal picture**  
Management has decided that AI matters. But there is no internal view of where the real potential is.
- 3 Where do we start?**  
The question is no longer whether AI is needed, but where — and there is no structured answer.

### THE BOTTOM LINE

Unstructured, tool-driven AI that was never implemented has become a sunk cost. Management knows AI matters, but lacks an internal picture of where the real potential lies.

## Three perspectives, one measurement framework — and where impact can be measured

Most relevant when management has already decided that AI matters, but lacks a structured view of the real potential. A full-company assessment completed in 4 weeks — ending with a pilot recommendation that forms the basis of the next step.

### CEO / Owner

Management knows AI matters, but cannot see where the real potential is.

### COO / Operations

Wants to understand which processes contain real AI potential — and in what order.

### CIO / IT

Wants a clear prioritization order and a realistic implementation plan.

## Where change can be measured

### Structured AI view

Management understands where real potential exists — not from a list of tools, but from a structured assessment.

### Prioritized roadmap

Opportunities are ranked by value and feasibility — teams know where to start.

### Pilot prepared

The audit concludes with a concrete pilot recommendation — preparing the next step.

## What it does in practice — key capabilities

### Process Assessment

Reviewing business processes to identify repetitive, automatable, or AI-supported work.

### Data Assessment

Evaluating data quality and maturity — what can and cannot yet support AI.

### Documents & Content

Identifying unused, AI-processable information across documents, images, and video sources.

### Information Flow

Where information gets stuck or lost — and where AI can improve the flow.

### Prioritization & Roadmap

Opportunities ranked by value and feasibility — with a concrete sequence.

### Pilot Recommendation

The outcome: a first implementation recommendation with success criteria, data requirements, and scope.

— THE DIFFERENTIATOR • THE THREE PRINCIPLES

## Three principles — comprehensive, potential-driven, well-founded

1

### Comprehensive, not a sample

Processes, data, documents, images, videos, information flows — the whole company, not a single department.

2

### Potential, not tools

We identify where real AI potential exists — not which tool looks interesting.

3

### Ends with a pilot recommendation

The next step (the Pilot) is prepared: success criteria, data requirements, scope.

#### WHY IT MATTERS

The Compass Audit is built on three principles: a company-wide assessment, the search for real potential (rather than tool cataloguing), and a concrete pilot recommendation — ensuring the audit leads to a well-founded next step.

# Proof of expertise

## Core architectural principles

### Comprehensive, not a sample

Processes, data, documents, images, videos, information flows — the whole company, not a single area.

### Potential, not tools

We identify real AI potential — not which tool might be interesting.

### Ends with a pilot recommendation

The next step (the Pilot) is prepared: success criteria, data requirements, scope.

## What makes the AI COMPASS AUDIT different

### Full assessment

Processes, data, documents, images, videos — the entire organization, systematically.

### Potential, not tools

We identify where real AI value exists — not which tool could be purchased.

### Sometimes the advice is: not yet

If an area is not ready, we say so — and show the right sequence.

### The team that assesses also implements

The same team from the first workshop to the live system.

## ABOUT THE PRICE — HONESTLY

The AI Compass Audit starts with a fixed-price proposal — from €4,950 + VAT, depending on company size and scope, delivered in 4 weeks. The real question is not the price, but the cost of unstructured, tool-driven AI that never gets implemented. The audit systematically identifies AI opportunities and prioritizes them.

# You bought AI, but did you **implement** it?

Let's take a look together at where your company stands today — and whether the Compass Audit is truly the right next step.

## Comprehensive

A full-company AI assessment.

*Evidence: processes, data, documents, images, videos.*

## Potential

We identify real AI opportunities.

*Evidence: we do not create tool lists.*

## Well-founded

Prioritization + pilot recommendation.

*Evidence: from €4,950, 4 weeks, fixed price.*
