

— PRODUCT OVERVIEW · DOCUMENT & PROCESS MANAGEMENT

Transparent workflows — streamlined operations.

Nearly every company has processes that rely on email chains, shared folders and unwritten rules kept in people's heads. Omnit organizes your workflows and documents into a transparent, traceable and automated system — so it is always clear where a case stands, and nothing gets stuck.

Work is rarely slow because people are slow — it is slow because the process lacks transparency. We map, organize and make your operations fully traceable.

transparency

end-to-end traceability

workflow

automatic routing and delegation

version control

the current valid version is always clear

process insight

based on your actual operations

An Implementation Partner, Not a Consultancy

We build systems that solve real business problems — tailored to existing operations, sustainable in the long term, for mid-sized and large enterprises. We do not pursue the most fashionable solution; we pursue the best value for money.

Three Pillars, One Partner

AI Factory

Practical AI for enterprise environments: document processing, automation, customer service, image and video analytics, prediction, intelligent search.

Data Solutions

Reliable reporting starts with well-managed data: ETL, BI, master data management, migration, Data Governance.

Custom Development

Business applications, system integrations, process digitization — from frontend to backend, cloud and hybrid.

What Makes Us Different

- **The team that assesses the project also builds it** — from the first workshop to production.
- **We build systems, not disconnected APIs** — frontend, backend, databases, integrations.
- **We start from real operations, not templates.**
- **Modular approach** — complete systems or individual components.
- **We specialize in projects where the challenge is difficult to define.**

KEY MESSAGE

We start with assessment and finish with a working system — and the same team carries the project from the first workshop to production.

Practical AI with Real Business Value — Not Hype

A generic AI subscription is not the same as AI built around a specific business problem, measured and integrated into enterprise operations. We build the latter: complete AI processing pipeline from your data, testing multiple models on the same dataset and selecting the best value-for-money solution.

Core AI Capabilities

- **Document Processing** — invoices, forms, contracts (typically 80% processing time reduction).
- **AI Automation** — replacing repetitive manual processes.
- **Customer Service & Contact Centers** — AI-assisted responses in Hungarian.
- **Image & Video Analytics** — manufacturing and visual quality control, performance measurement.
- **Predictive AI** — quality and behavioral forecasting.
- **Intelligent Search (RAG)** — enterprise knowledge search with source references.

Ready-Made AI Products

- **AI Invoice Posting** — rule-based, audit-ready coding from images and PDFs.
- **AI Conveyor Monitor** — video analytics for operational performance.
- **Intelligent Chatbot** — hallucination-free, RAG-based knowledge assistant.
- **Intelligent Search Engine (RAG)** — answers from documents, not lists.

Every product and service at a glance

AI Factory brings together AI services; Data Solutions creates order in enterprise data; Development builds custom systems. Every engagement starts with a fixed-price assessment.

DOCMAN: Enterprise Document Management (Case
Management, QES, Company Gateway)

Transparent, traceable, automated workflows

We organize workflows and documents into a transparent, traceable and automated system — fulfilling three roles at the same time.

- 1 Maps the process**
Understands how the process actually works — where it gets stuck, where time is lost, and where responsibility disappears.
- 2 Structures the workflow**
Workflows, approval chains and document lifecycle — digitally defined with automatic routing.
- 3 Makes the process transparent**
It is always clear who is responsible for the next step.

IMPORTANT DISTINCTION

Document & Process Management is not just another folder structure. It organizes workflows and documents into a transparent, traceable and automated system. Work is rarely slow because people are slow — it is slow because the process lacks transparency, and nobody knows who is responsible for the next step. This system makes operations transparent, traceable and automated.

Three situations where processes lack transparency and get stuck

- 1 Unstructured, fragmented processes**
Processes become chains of emails, folders and unwritten rules that nobody can fully oversee.
- 2 No visibility into where a case stands**
It is not clear where a case stands, who is responsible, or what comes next.
- 3 Missed deadlines**
Without automatic notifications and deadline tracking, decisions and actions are delayed without anyone noticing.

BOTTOM LINE

Lack of process transparency and missed deadlines cost money every day. Work is rarely slow because of people — it is slow because nobody knows who is responsible for the next step.

Three perspectives, one solution — and where the value is created

It is most relevant where processes rely on chains of emails, shared folders and unwritten rules, and where lack of transparency and frequent bottlenecks have become part of everyday operations. Decisions are typically made by operations and process owners.

COO / Operations

A transparent, traceable workflow with fewer bottlenecks results in faster operations.

Process / Quality Manager

The main value comes from digital workflows and structured document lifecycle management.

Team Leader

Clear visibility into every case and who is responsible for the next step makes day-to-day coordination easier.

Where the value can be measured

Faster turnaround

Automatic routing and full visibility keep processes moving and reduce delays.

No lost cases

It is always clear who is responsible for the next step — nothing gets lost in emails or shared folders.

Deadlines met

Automatic notifications and deadline tracking ensure that no task slips by unnoticed.

What it does in practice — core capabilities

Process mapping

We understand how the process actually works — where it gets stuck and where time is lost.

Workflow & approvals

Digital workflows define who does what and in what order — with automatic routing.

Document lifecycle

Structured document management from creation to archiving — with version control.

Transparency & traceability

It is always clear where a case stands, who is responsible, and what comes next.

Automated notifications

The system alerts users when a decision is required, a deadline is approaching, or a process gets stuck.

Integration & scalability

Connects with existing systems — and can later be extended with AI-powered document processing.

— THE DIFFERENTIATOR · THREE BUILDING BLOCKS

Three principles — real operations, transparency, scalability

1

Built around real operations

We first map how work is actually done — not just how the policy says it should be.

2

Transparent & traceable

It is always clear where a case stands and who is responsible for the next step.

3

Scalable & integrated

Connects with your existing systems — and can later be extended with AI-powered processing.

WHY IT MATTERS

We map real business processes (not just what the policy describes), make the entire workflow traceable in one place, and build an integrated solution that can later be extended with AI-powered processing — creating workflows that are transparent, traceable and automated.

Proof of expertise

The three building blocks

Built around real operations

We do not force a standard workflow onto your business. We first map how work is actually done — then build the solution around it.

Always clear who is next

The system shows where every case stands and what comes next. A stalled case never goes unnoticed.

Expandable through integration

We connect the solution to your existing systems, creating one transparent workflow. Later, it can also be extended with AI-powered document processing.

What makes DOCUMENT & PROCESS MANAGEMENT different

Tailored to your operations

We first map how work is actually done.

Full visibility

It is always clear who is responsible for the next step.

Automated deadlines

The system automatically alerts users when a decision is required or a deadline is approaching.

AI-ready

The existing system can later be extended with AI-powered document processing.

ABOUT PRICING — HONESTLY

There is no fixed price list — every project is priced according to the number of workflows, their complexity and the required integrations. The real question is not the price, but the cost of non-transparent processes, stalled workflows, lost cases and missed deadlines that a transparent, automated workflow eliminates.

— NEXT STEP

Which workflow takes the **most time and effort today?**

In a 30-minute consultation, we review your current operations and show how they can become more transparent and efficient. If this solution is not the right fit for your business, we will tell you that honestly.

Transparent

Always clear who's next.

Proof: The entire workflow is fully traceable.

Automated

Workflows, notifications and deadlines.

Proof: Fewer bottlenecks, faster operations.

Expandable

Integrated today, AI-ready tomorrow.

Proof: Can be extended with AI-powered document processing.
